Explanation of the abbreviations and pictograms

Wn = nominal width	ved = vertical duct	OP = option (delivered with the product)
Hn = nominal height	hod = horizontal duct	KIT = kit (delivered separately for repair or upgrade)
Sn = free air passage	vew = vertical wall penetration	PG = connection flange to the duct
SI = free surface	V = volt	GKB (type A) / GKF (type F): "GKB" stands for standard plasterboards (type A according to EN 520) while "GKF" plasterboards offer a higher fire resistance for a similar plate thickness (type F according to EN 520)
E = integrity	W = watt	Cal-Sil = calcium silicate
I = thermal insulation	V AC = Volt alternating current	$\zeta [-]$ = pressure loss coefficient
S = smoke leakage	V DC = Volt direct current	Q = airflow
60/120 = fire resistance time	E.TELE = power supply magnet	ΔP = static pressure drop
Pa = pascal	E.ALIM = power supply motor	v = air speed in the duct
o -> i = meets the criteria from the outside (o) to the inside (i)	Auto = automatic	Lwa = A-weighted sound power level
i <-> o = fire side not important	Tele = remote controlled	ME = motorised
AA = automatic activation	Pnom = nominal capacity	H = habitat
MA = manual activation	Pmax = maximum capacity	
multi = multi compartment	DAS MOD = modular product	

DECLARATION OF PERFORMANCE

UKCA_DoP_Rf-t_V36_EN_B-01/12/2024

1. Unique identification code of the product type:
2. Intended use(s):
3. Manufacturer:
4. System/s of AVCP:
5. Designated standard / Approved body/ certificate of constancy of performance:
6. Declared performance according to BS EN 12101-8:2011

KAMOUFLAGE AP
Smoke control damper to be used in smoke control systems, in multi-compartment applications at fire temperatures, or in single-compartment applications.
Rf-Techologies NV, Lange Ambachtstraat 40 B-3860 Oosterzele
System 1
BS EN 12101-8:2011, Efector UK/Ireland Ltd 2822; in aanvraag
(Fire resistance according to BS EN 1366-10, classification according to BS EN 13501-4)

Essential characteristics

1 Type of installation: in duct/shaft-mounted 0/180°.

Nominal activation conditions/sensitivity:	Pass - automatic activation	Integrity (E)	60, 90 and 120 minutes
Response delay (response time): closure time	Pass - automatic activation 10000 cycles (no load)	Insulation (E)	60, 90 and 120 minutes
Operational reliability: cycling	Pass	Smoke leakage (E/S)	60, 90 and 120 minutes
Durability of response delay:	Pass	Mechanical stability (under E)	Pass
Durability of operational reliability:	Pass	Maintenance of cross section (under E)	Pass
Approved accessories	EASY-KAP AP or EASY-KGC AP mounting frame, Option Black		
High operational temperature (HOT 400/30):	NPD (no performance determined)		

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:
Duchan Laplace, R&D Manager

Oosterzele, 01/12/2024

Product presentation KAMOUFLAGE AP

Product presentation KAMOUFLAGE AP

The Kamouflage AP is a v_{edw} -classified, motorized, aesthetic smoke control shutter that can be perfectly integrated in smoke control systems. It is CE-certified in accordance with EN12101-8, suitable for vertical mounting in ducts or concrete smoke control shafts. Offering 60, 90 or 120 minute fire resistance at minimum pressure drop, in single- or multi-compartment applications. In addition, Kamouflage AP has a C₁₀₀₀₀ cycling classification, which means it can be used in combined smoke control and environmental, energy saving systems.

It opens to supply and release air or to evacuate smoke in emergency situations whilst maintaining its fire resistant integrity in both directions in standby position.

The Kamouflage AP is designed for use in:

- Pressure Differential Systems (PDS): e.g. pressurising staircases.
- Smoke and Heat Exhaust Ventilation Systems (SHEVS): ventilating protected lobbies and corridors through shafts, either naturally or mechanically, or a combination of both.
- Energy saving systems combined with PDS or SHEVS: e.g. night cooling systems.

Smoke control shutters and dampers are suitable for use in ventilating protected lobbies, venting to shafts either naturally or mechanically. They open to evacuate smoke in emergency situations whilst maintaining fire resistant integrity in both directions in standby position.

- can be used in smoke management systems requiring a v_{ed} , v_{ew} or v_{edw} -classification
- optimal smoke control system thanks to high free area and minimal pressure losses
- easy to install thanks to its light weight
- aesthetic solution that can be integrated in any interior design
- simple operating tests through remote opening and resetting by an actuator
- opens 90° and at intermediate positions when installed in shallow ducts/shafts
- excellent thermal and acoustic insulation thanks to a double-walled insulated door leaf and seals

- tested according to EN 1366-10 and EN 1366-2
- compliant with EN 12101-8
- compliant with MVV TB 2023/1 Anhang 14, 7
- fit for use as air release and air supply vent in PDS-systems according to EN 12101-6 & -13
- suited as air supply and smoke evacuation vent in SHEVS-systems according to EN 12101-8
- light weight: ≤ 35 kg
- ready-to-install finish (white lacquered RAL 9010)
- approved for installation in calcium-silicate ducts, Geostaff gypsum, Tecniver, Glasroc, Extha and concrete shafts.
- maintenance-free
- large range
- Optional installation frame with or without fall protection.

Evolution - kits

EASY-KAP AP

Mounting frame (delivered separately)

EASY-KGC AP

Mounting frame with hinged drop guard grid (delivered separately)

Options - at the time of order

BLACK

Black finish (for use with a grill only)

TL

Trailing lead 3 m for external connection

Storage and handling

Storage and handling

As this product is a safety element, it should be stored and handled with care.

Avoid:

- any kind of impact or damage
- contact with water
- deformation of the casing

It is recommended:

- to unload in a dry area
- not to flip or roll the product to move it
- not to use the damper as a scaffold, working table, etc.
- not to store smaller dampers inside larger ones

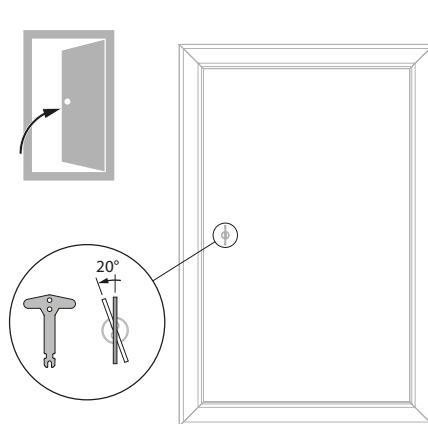

Installation

General points

- The installation must comply with the installation manual and the classification report.
- The installation of the smoke control duct must comply with the classification report delivered by the manufacturer.
- Axis orientation: see the declaration of performance.
- Avoid the obstruction of adjoining smoke control ducts.
- Verify if the blade can move freely.
- Rf-t smoke dampers may be applied to smoke control ducts that have been tested according to EN 1366-8 and EN 1366-9 as appropriate, constructed from similar materials with a fire resistance, thickness and density equal or superior to these of the tested materials.
 - ▲ Caution: when fitting, the product should be handled with care and remain protected from any sealing products.
 - ▲ Caution: before putting the installation into operation, clean off all the dust and dirt.
 - ▲ Caution: bear in mind the blade's clearance inside the smoke control duct.

Operation: manual opening**1**

1. Unscrew the finishing cap from the opening in the door. Use the key to do this.

2

2. Turn the key 20° anti-clockwise and push the shutter into its open position.

Operation: manual closing**1**

1. Turn the key 20° anti-clockwise. Push the actuating arm in the direction of the arrow and pull the shutter into its closed position.

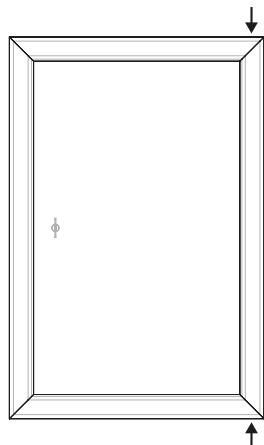

2

2. Turn the key 15° clockwise. The key blocks in the lock and the door can be pulled into its lock.

Installation

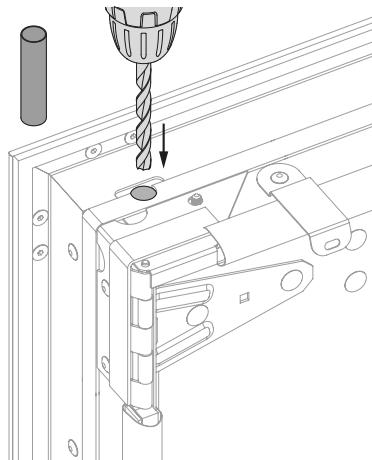

Electrical wiring

1

1. The electrical connection is possible via the 2 corners at the side of the hinges.

2

2. Drill a hole in the refractory material at the chosen corner(s). The galvanised part at the inside of the shutter is already indented.

3

3. Pierce an opening in the connection box. Affix the grommet delivered with the product.

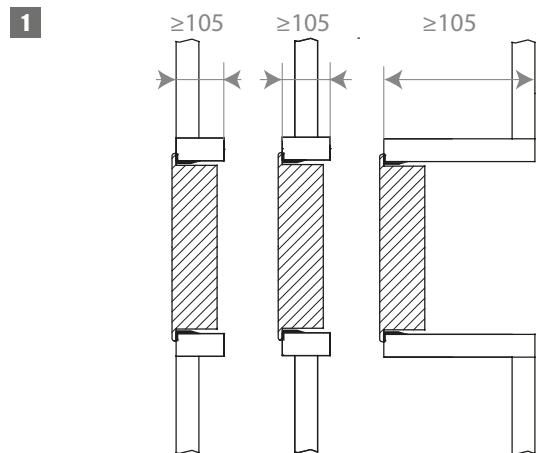

4

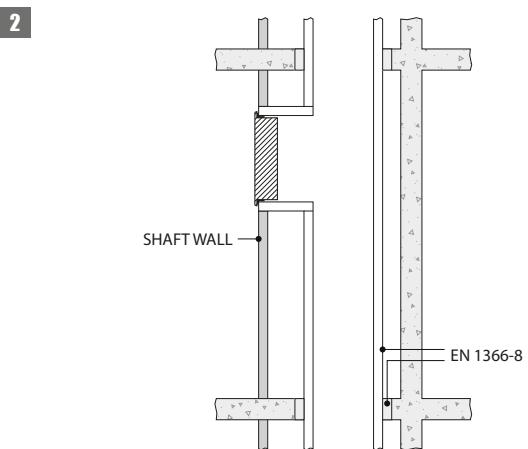

4. Lead the cables through the opening. Use the protective sleeve (1), the fixation clips (2) and the plastic cable clamp (3) to attach the cables to the frame. Lead the cables to the connection box through the grommet (4) and connect according to the electrical connection diagram.

⚠ Caution: after passing and fixing the cables, you need to seal the drilled hole in the refractory plates around the electrical cables with fire resistant adhesive sealant (BCM f.e.).

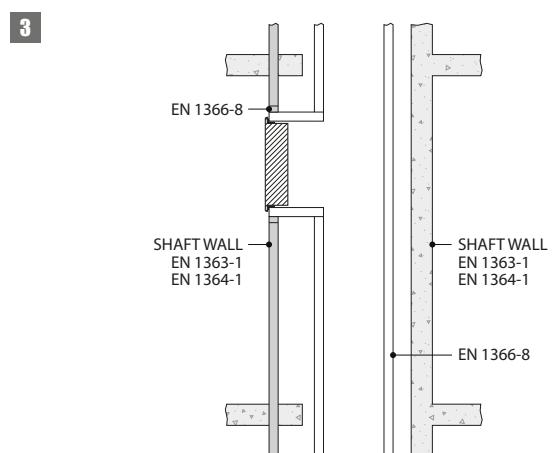

Installation in a duct

1. The shutter is fixed in the opening. It can be placed either in the duct, in the duct axis, outside the duct or duct extension or in surface-mounted.

2. Example of installation in a shaft

3. Example of installation in a shaft

Installation

Installation in a shaft

1

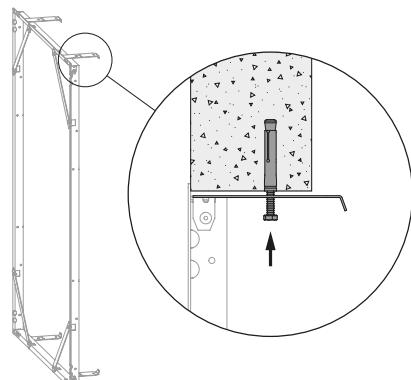

Installation into vertical concrete shaft with mounting frame

1

1. Make an opening with dimensions $(W+20) \times (H+20)$ mm. Mortaring the mounting frame is not permitted.

2

2. The mounting frame should always be fastened to the concrete duct with screws and dowels ($\varnothing 6$ x minimum 60 mm, steel or stainless steel).

Two fixing lugs are provided at the bottom and at the top of the mounting frame: fold these against the duct and fasten the mounting frame with 4 screws $\varnothing 6 \times 60$ mm, taking care not to misshape it. These screws can be inserted through any of the punched holes in the lugs, depending on the thickness of the duct wall.

The finished opening must have the same size as the mounting frame $(W+10) \times (H+10)$ mm.

3

3. Put aside the screws that are affixed to one of the cross slats, then unscrew the 4 cross slats of the mounting frame and fold the 8 fastening plates in the frame.

When the EASY-KGC AP mounting frame is used, unfold the drop-guard grid (90°) in the duct.

4

4. Rotate the four fastening plates on the damper 90° (to the upright position).

Installation

5

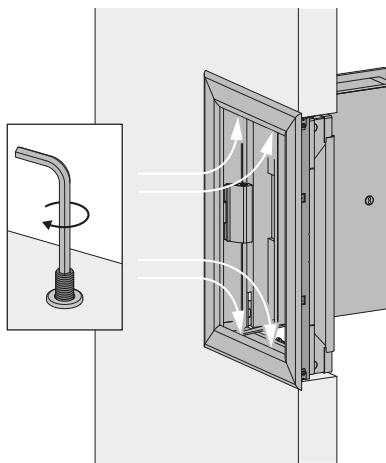

5. Open the shutter and position it in the mounting frame. Fasten the shutter onto the mounting frame with the 4 screws supplied, as shown in the drawing. Tightening the screws pulls the shutter towards the wall until its final position. You can also slightly correct the angle of the shutter with respect to the mounting frame. Connect the mechanism according to the wiring diagram.

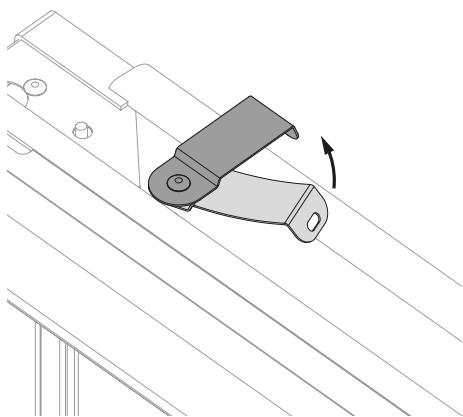

⚠ Caution: Connecting the frame to an uneven surface can lead to distortion of this frame. Check whether the slack between the frame and the surface of the door is still acceptable.

Check the mobility of the shutter.

6

6. Tighten the position screws until just against the shaft, without distorting the frame. These screws prevent the Kamouflage AP from sagging in the opening.

Installation into vertical concrete shaft without mounting frame**1**

1. Rotate the four fastening plates on the damper 90° (to the upright position).

The fastening plates are not used for an installation without a mounting frame.

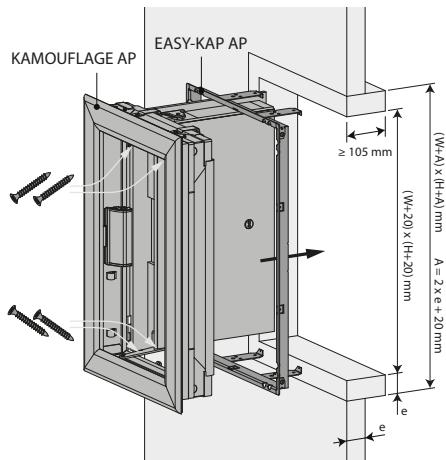

2

2. Make an opening with dimensions $(W+10) \times (H+10)$ mm.
Fix the shutter in the opening using 4 screws and dowels
 $\varnothing 6 \times 60$ mm.
Connect the mechanism according to the wiring diagram.
Check the mobility of the shutter.

Installation

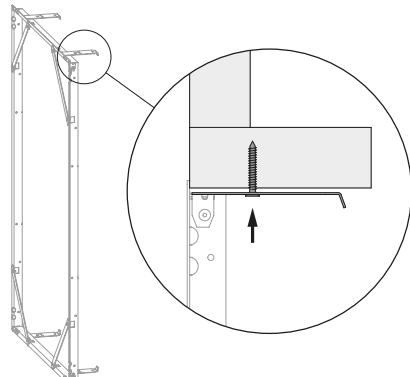

Installation into vertical duct with built-in mounting frame: general instructions for all types of ducts (other than concrete)

1

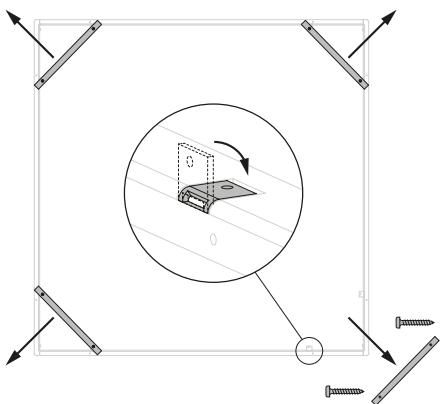

1. Make an opening with dimensions $(W+A) \times (H+A)$ mm.
 $A = 2 \times$ thickness sleeve (e) + 20 mm .
 Fit a sleeve of the same type of material and thickness as the duct (thickness e) of minimum 105 mm deep in the opening.

2

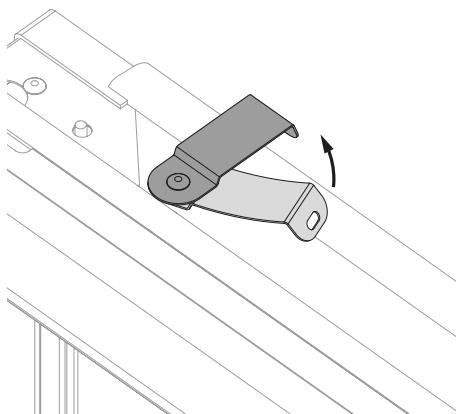

2. Two fixing lugs are provided at the bottom and at the top of the mounting frame: fold these against the sleeve.
 Screw the mounting frame to the sleeve using screws Ø 6 x e mm (e-thickness of the sheet material). These screws can be fixed in one of the openings provided for this purpose, depending on the depth of the sleeve.
 Take care not to misshape the frame during its installation. The finished opening must have the same size as the mounting frame $(W+10) \times (H+10)$ mm.

3

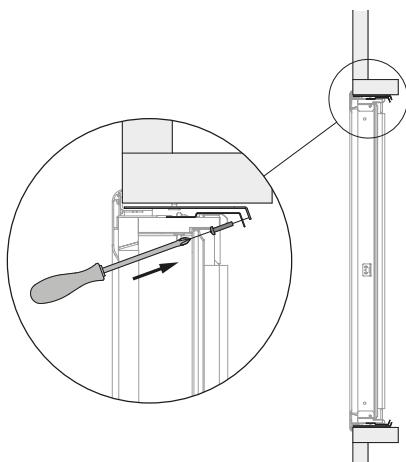

3. Put aside the screws that are affixed to one of the cross slats, then unscrew the 4 cross slats of the mounting frame and fold the 8 fastening plates in the frame.
 When the EASY-KGC AP mounting frame is used, unfold the drop-guard grid (90°) in the duct.

4

4. Rotate the four fastening plates on the damper 90° (to the upright position).

5

5. Open the shutter and position it in the mounting frame. Fasten the shutter onto the mounting frame with the 4 screws supplied, as shown in the drawing. Tightening the screws pulls the shutter towards the wall until its final position. You can also slightly correct the angle of the shutter with respect to the mounting frame.

Connect the mechanism according to the wiring diagram.

⚠ Caution: Connecting the frame to an uneven surface can lead to distortion of this frame. Check whether the slack between the frame and the surface of the door is still acceptable.

Check the mobility of the shutter.

6

6. Tighten the position screws until just against the shaft, without distorting the frame. These screws prevent the Kamouflage AP from sagging in the opening.

Installation

Installation into vertical duct (without a mounting frame): general instructions for all types of ducts (other than concrete)

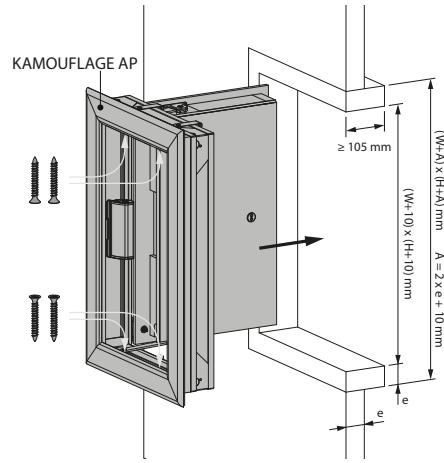

1

1. Rotate the four fastening plates on the damper 90° (to the upright position).

The fastening plates are not used for an installation without a mounting frame.

2

2. Make an opening with dimensions $(W+A) \times (H+A)$ mm.
 $A = 2 \times \text{thickness sleeve (e)} + 10$ mm.

Fit a sleeve of the same type of material and thickness as the duct (thickness e) of minimum 105 mm deep in the opening. Place the shutter in the opening.

Ensure the cables are not trapped at this stage.

Fix the shutter in the opening using 4 screws Ø6 x 40 mm.

⚠ Caution: make sure that the screws don't exceed the sleeve's thickness!

Connect the mechanism according to the wiring diagram.

Check the mobility of the shutter.

3

3. Example of mounting in a branch of a vertical duct, with a pre-wall finish.

Product maintenance

Smoke control dampers must form part of a professionally designed Smoke and Heat Exhaust Ventilation System (SHEVS) that will be specially suited to an individual buildings size, usage and structure. SHEVS are Fire Safety Installations and it is essential they are subject to the routine inspection and maintenance requirements of the country of installation of the SHEV system. For example, BS7346 part 8, NF S 61-933 and EN 13306.

Kamouflage AP dampers are virtually maintenance free, however, they will require occasional operation and maintenance as part of a system specific routine operational test and maintenance procedure. It is recommended that as part of the system testing and maintenance procedure that different individual dampers are operated at each system test such that each damper within a system is inspected, checked and tested at least once in any 6-month period.

The following instructions are a general guide and our recommendations to the procedures required:

- a) Operate each ventilator at least once; checking that the unit opens and closes fully.
- b) Visually observe the control mechanisms ensuring the devices are in place and are not obviously damaged or obstructed.
- c) Inspect each ventilator in its open position to check that the intumescent fire seals and smoke seals between the vent frame and doors are not damaged and are securely attached. Wipe any dirt build up from the seals. Inspect the door leading and trailing edge seals and lightly lubricate with a machine oil and a silicone grease to the release latch.

Maintenance

- No specific maintenance required.
- Schedule at least 2 visual checks each year.
- Remove dust and all other particles before use.
- Follow local maintenance regulations (i.e. BS9999 Annex V; NF S 61-933) and EN13306.

Operation and mechanisms

Operation and mechanisms

VA AP MEC Mechanism for remote controlled unlocking and resetting.

Mechanism for the smoke control shutters KAMOUFLAGE AP. Remote controlled unlocking and resetting.

Unlocking

- **manual unlocking:** with the key (delivered in the bag together with the installation guidelines)
- **automatic unlocking:** n/a
- **remote unlocking:** remote by connection of 24 V DC or 48 V DC

Resetting

- **manual resetting:** turn the key 20° anti-clockwise. Push the actuating arm in the direction of the arrow and pull the shutter into its closed position. Turn the key 15° clockwise. The key blocks in the lock and the door can be pulled into its lock.
- **motorised resetting:** remote controlled by reversing (2-wire) control or alternating (3-wire) control of the voltage to the motor. After the unlocking or rearmament is complete, the voltage on the motor may be stopped.

Sample order

KAMOUFLAGE AP	120	400	685	TL	BLACK
1	2	3	4	5	6

1. product
2. fire resistance of 60 or 120 minutes
3. width
4. height
5. option: trailing lead 3 m
6. option: black finish

Approvals and certificates

All our products are submitted to a number of tests by official test institutes. Reports of these tests form the basis for the approvals of the products.
